

Article codes

In the Signat Fits program you'll notice a logic coding of the article numbers.

In the **SMK** adapter range the first two numbers represent the kind of article. The third and fourth positions represent the car brand, while the fifth and sixth positions indicate a more specific qualification of the product. The other positions are serial numbers. In the **S** range the first two numbers indicate the kind of product; the third and fourth positions represent a car brand, while the last two numbers are serial numbers.
